

## Care and Maintenance of PVC Blinds

When clear PVC is new it may need assistance to roll correctly. The clear will shortly develop 'memory' and roll easier.

If zip sides are fitted, zips should always be zipped right up or fully down.

If you wish to use blinds not fully down, this should only be done whilst in attendance and not during strong winds.

If the tie-down straps are fitted then these should be positioned and tensioned whenever the blinds are down.

Never allow water to pool in the blind when rolled up. Never roll up while wet. If this is unavoidable, lower blind as soon as possible and allow drying. If an opaque 'patch' develops on the blind, leave down to 'bake' the affected area.

**TIP:** *If you are leaving the house unattended for a period, leave blinds rolled up at an angle which will allow water to drain from the roll.*

**CLEANING:** *Best to sluice with warm soapy water first, then wash with soft cloth rag to remove any grit, then rinse well.*
